Southern California Edison By the Numbers

Source: SCE 2018 Sustainability Report
https://www.edison.com/home/investors/sustainability.html
California set a goal to **reduce emissions 40%** below 1990 levels **by 2030**, and 80% by 2050.

Governor Brown’s Executive Order B-48-18 increases the state target for zero-emission vehicles to 5 million by 2030.

If we want to get to **zero emissions**, eventually we have to **replace** many of the things we rely on today that require combustion.
Emissions contributors

• The largest contributor is **transportation**, followed by the electric sector.

  Industrial, and commercial and residential sectors trail not too far behind.

• The most **practical and economical** way to create real change is for sectors to **work together** to find an affordable alternative to fossil fuels.
SCE’s Clean Power & Electrification Pathway

Embrace disruption. And electrify.
Transportation Electrification Pathway to 2030

- 24% of cars and light trucks (7 Million total)
- 15% of medium-duty trucks and vans (180,000 total)
- 6% of heavy-duty trucks and buses (22,000 total)

20x increase

Removing 17,000 tons of NOx and 58 million metric tons of greenhouse gas emissions from California’s Neighborhoods by 2030
## SCE’s role: availability, affordability, & awareness

| - Provide charging station rebates for commercial & residential | - Build out capitalized charging infrastructure for:  
  - Passenger vehicles at workplaces, apartments, and public locations  
  - Commercial freight vehicles  
  - Transit buses | - Provide market education and outreach programs  
- Run broad and targeted advertising  
- Provide fleet customer support and advisory services |
| - Provide new and used vehicle rebates (Low Carbon Fuel Standard) |  |  |
| - Invest in customer-side infrastructure |  |  |
| - Offer special rates for EV charging |  |  |
588,000 EVs registered in CA, 48% of US total as of June 2019.

SCE provides up to $1,000 rebate per vehicle purchased including used EVs, distributed 63,000 rebates to customers as of May 2019 totaling $29 Million.

1,250 Level 2 ports installed by SCE through Charge Ready at 78 sites, $22 Million thru 2018.

Up to 25 DC fast chargers underway in urban areas, $4 Million.

At least 30 charge ports being installed by SCE at several transit agency sites for all electric buses, $4 Million.

Nine rubber tire gantry cranes will be electrified and 20 charging stations for yard haulers will be installed. Construction is underway.
1. L2 Chargers provide charging at higher voltage and can charge cars about 5x faster than home charging;
2. DCFC: DC fast charging, provide an 80% charge to many BEVs within 30 minutes

77% of approved utility EV infrastructure investment in US is in CA

SCE program sized to meet ~30% of estimated need for light-duty charging infrastructure

Future market support and targeted programs

Pilots
Charge Ready 2
Charge Ready Transport
Mass Market
Charge Ready: Light Duty Infrastructure Pilot

Program covers costs associated with service drop, meter, panel, and circuit dedicated to EV charging. Make-ready ends at interconnection point with customer charging equipment providing AC service.

Over 1,000 ports installed at over 70 site; 50% in underserved communities
Most customers require more than 30 calendar days to procure the EVSE.

The 10-charge-port minimum requirement was a challenge for many customers.

The “Base Cost” concept was challenging for customers to understand.

A few customers opted not to participate due to the Demand Response requirement for Level 2 charging stations.

MUDs have unique challenges for Charge Ready adoption.

Some market segments and specific customers require additional time to process and execute easement documents.
Charge Ready Transport provides infrastructure for fleet electrification

- Approved total program budget of $356.4M
- Achieve minimum 870 sites with 8,490 electric vehicles procured or converted
- Covers cost of all infrastructure needed up to charging station
- Charging station rebates available for transit/school buses and sites in disadvantaged communities

Apply → Reserve Funding → Procurement → Design & Build → Rebate

2-3 months → 45 days → 6-9 months → 1 month

Energy for What’s Ahead
SCE will advise customers throughout the process

Transportation Electrification Advisory Services
- Fleet Analysis Services
- Fueling calculation and Rate Analyses

Transportation Electrification Project Management
- Single Point of Contact for multi-site projects
- Dedicated project management group for EV charging projects
Plan for Charge Ready 2: Speed, Scope, and Scale

Proposal to deploy 32,000 level 2 ports at 3,200 workplaces, apartments, destination centers and fleets; Install an additional 200 DC Fast Chargers.

Offer apartments and government customers a turnkey solution: SCE can install, own, and maintain up to 4,230 new charging ports.

Up to $3,500 rebate per port to exceed CalGREEN building code and install a minimum of 16,000 ports at new construction multi-unit dwellings.

Multi-prong marketing strategy:
• Mass media advertising of EVs and benefits;
• Targeted marketing on EV experience;
• Support businesses to convert fleets to electric;
• Program-specific marketing.
SCE will continue to develop new programs to spur EV adoption

**AB1082 Schools**
- **No-cost or utility owned infrastructure** to serve level 1 or level 2 EV charging
- Available to **K-12 Schools**
- **One-time rebate** (with the no-cost option) to offset the costs of charging stations

**AB1083 Parks**
- **Utility owned** infrastructure (for existing or new construction) to serve level 2 or DCFC EV charging
- Available to **California State parks and beaches**
Claim your Clean Fuel Reward - $1,000 Rebate on Your EV

- Available to **SCE residential customers** who drive electric vehicles (EV)
- Offers a **one-time $1,000 rebate** (increased from $450)
- **Lease or purchase** qualifies
- **New or used** vehicles - up to three different owners of the same EV can qualify
- For more information or to apply for the Clean Fuel Rewards Program visit [www.scecleanfuel.com](http://www.scecleanfuel.com)
Over 6 million internal combustion engine cars are sold in the US each year. Successfully decarbonizing the transportation sector will require all of us working together.
Imagine a world where the energy that powers our lives and propels us forward is provided by the Earth’s clean resources.
